#### Uncertainty

The assigned Uncertainty covers uncertainty contribution from Characterization, In homogeneity, Storage & transport stability etc (wherever applicable) , is the combined standard Uncertainty ,calculated using a coverage factor (K= 2) which gives a level of confidence of approx.95%. As per ISO 17034:2016 & ISO Guide 35, ISO 33405:2024, for this pharmaceutical standard assigned uncertainty value is considered to be negligible w.r.t. defined limits of method specific assays for which the DRA/RM is used.

**Metrological Traceability and Measurement methods**

Assigned value is traceable to SI units through use of Primary Standard mass balance methods(Physical & Chemical) with Inter Laboratory Collaborative studies using Indian Pharmacopeia standards specifications. Characterization done by combination of Primary Reference Methods viz. NMR, LCMS, with use of pure substance/traceable RM/CRM in compliances with ISO Guide 35, ISO 33405:2024 & ISO/IEC-17025.

**Commutability**

Not Applicable

**Intended Use**

This reference material intended for Melting point , R& D and analytical use only. Not for drug, house hold or other uses.

**Instruction for handling and use**

Allow the sealed container to equilibrate at ambient/room temperature before opening for use. Do not dry, use "As on basis".

**Validity**

Stated Validity is applied, when material stored under recommended conditions with proper handling.

**Associated uncertainty:**

The associated uncertainty  $U_{CRM}$  reported with the certified values is calculated as combined expanded uncertainty  $U_{CRM}=k.U_{CRM}$  in accordance with EA 4/02 with  $k=2$  as the coverage factor for a 95 % coverage probability.

The combined uncertainty  $U_{CRM}$  is derived for combination of the squared uncertainty contribution:

$$U_{CRM} = \sqrt{U^2_{Charaterisation} + U^2_{Homogeneity} + U^2_{Stability}}$$

$U_{Charaterisation}$ : Is the uncertainty in accordance with ISO/IEC 17025 which includes the contribution of the primary reference material and the measuring system.

$U_{Homogeneity}$  : Is the between bottle variance in accordance with ISO 17034. The assessment of homogeneity is performed by analysis of a representative number of systematically chosen samples units.

$U_{Stability}$  : Is the uncertainty obtained from short term and long term stability in accordance with ISO 17034. The Stability studies are the basis for the quantification of the expiry date of this volumetric standard for the unopened bottle.
